

How can I clone a WordPress site through Plesk?

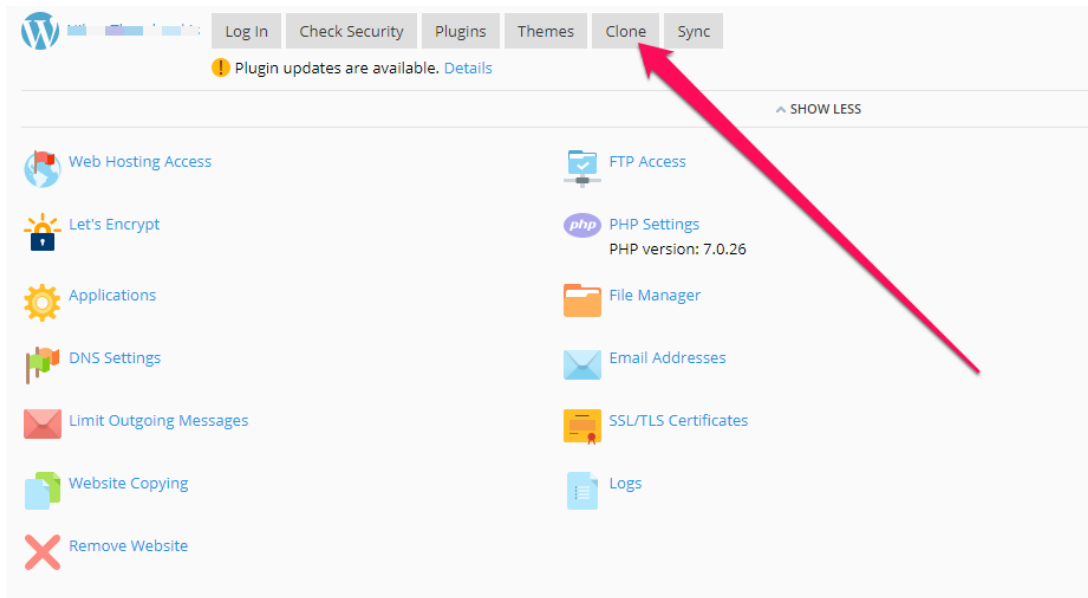

- 2021-08-12 - Άλλες

In case you have installed your WordPress website through Plesk, you can clone it to another domain or subdomain that you have added. In order to carry out the above action, follow the instructions described below:

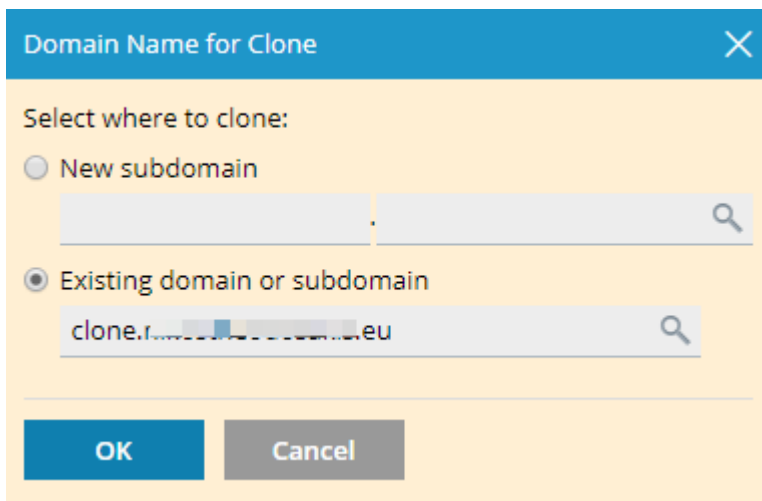

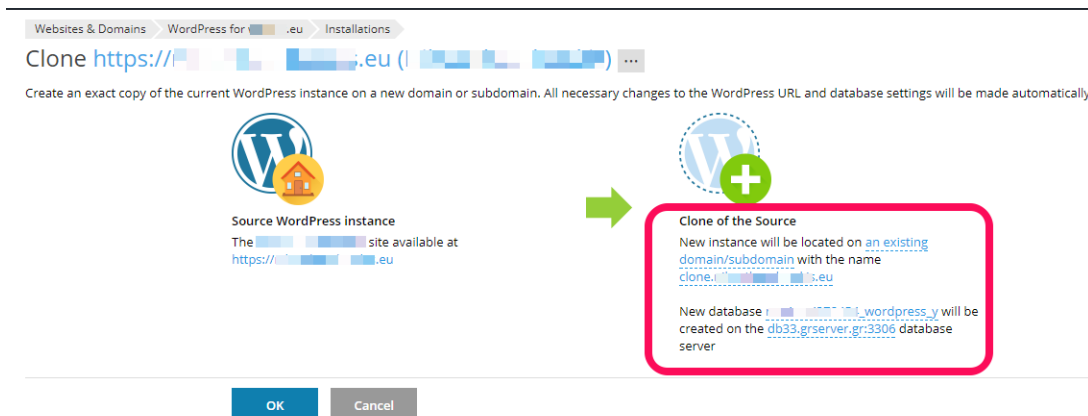

1. Log into [myTophost Panel](#) and click on **Plesk Login** in order to connect to the Plesk of the plan that you are interested in.

2. Below the WordPress installation, click on the **clone** icon.

3. Select the domain or subdomain that you want to clone (already existing or new) and click on **OK**.

4. Plesk will inform you that the process has been completed and that you do not need to take any further action.
