

How can I create a new domain in Plesk Onyx?

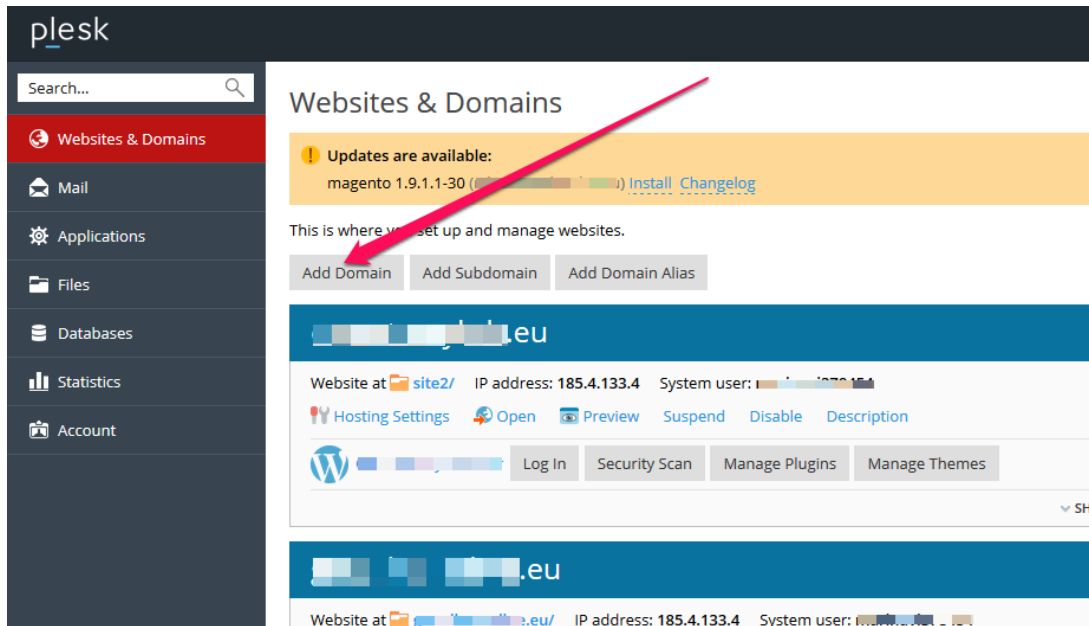

- 2021-08-10 - Άλλες

If you have the possibility to add a domain in your Plesk, take the following steps:

1. Log into [myTophost Panel](#) and select **Plesk Login** in order to connect to the Plesk of the plan that you are interested in.

2. In the tab **Websites & Domains**, click on **Add domain**.

3. In the tab **Adding New Domain Name**, fill in the following fields:

- **Domain name** - Enter the new domain name (1).

- **Location of the website's files** - There is a preselected main domain name which is also your main subscription (2).

- **Hosting type** - Select **Website Hosting** and leave the default options **Activate the DNS service** and **Activate the mail service** (3).

- **Document Root** - The name of the Root folder (4). Give the name that you want for your root folder (like httpdocs for your main domain. You will log in with the FTP information of your main domain and you will upload your files to that folder.)

- **Preferred domain** - Select **None** (5) in order for your domain to appear online whether it's typed with or without www and lastly, click on **OK**.

Websites & Domains

Adding New Domain Name

Domain name * 1
The website's Internet address, such as example.com.

Location of the website's files * 2

Hosting type 3

Activate the DNS service

Activate the mail service

Hosting Settings

Document root * 4
The path to the website home directory.

Preferred domain * www.newdomain.gr
 newdomain.gr
 None 5
Select the URL (either with or without the www. prefix) to which site visitors will be redirected via a SEO-safe HTTP 301 redirect.

* Required fields

Note: Enter the servers of your main domain name to your registrar and once you upload your files, your new website will be available online within 48 hours.
