

How can I create a subdomain in Plesk Onyx?

- 2021-08-24 - Άλλες

If you have the possibility to add a **subdomain** to your Plesk, follow the instructions below:

1. Log into [myTophost Panel](#) and select **Plesk Login** in order to connect to the Plesk of the plan that you are interested in.

2. In the tab **Websites & Domains**, click on **Add subdomain**.

3. In the tab **Add a subdomain**, fill in the following fields:

- **Subdomain name** - Enter the name of the subdomain (1)

- **Parent Domain** - Enter the domain that will be above the subdomain (2)

- **Document Root** - Enter the root folder of the subdomain where you will upload the subdomain files and click on **OK** (3)

Add a Subdomain

Subdomains are Internet addresses for different sections of your website. They use your main domain name and symbol instead of the name. Site visitors will be redirected to this subdomain regardless of the subdomain name

Subdomain name * 1

Enter * to create a wildcard subdomain.

Parent domain * 2

Hosting Settings

Document root * 3

The path to the website home directory.

* Required fields

OK Cancel
