

How can I enable SpamExperts on my hosting?

- 2019-03-07 - [SpamExperts](#)

SpamExperts is provided free of charge with all of Top.Host's [Shared Hosting](#) and [Reseller Hosting](#) packages and allows you to protect your incoming mail from Spam, phishing, and viruses. You can turn on the service very easily through myTophost Panel by following the steps as described below.

1. Sign in to [myTophost Panel](#).

2. Click the "Manage" button for the domain you wish to activate the service.

3. Locate the box named "SpamExperts" and click the admin button.

4. Depending on the hosting package, there is a possibility for a certain number of service activations. For each domain for which you want to activate the service, click on the corresponding button.

5. In order to complete the process, the MX () records of your domain DNS service should be replaced with the following:

domain. MX(0) mx1.fastmail.gr.
domain. MX(5) mx2.fastmail.gr.

Full details in order to do this, you can find [here](#).

To manage the service, click on "Connect SpamExperts" to go to the relevant control panel. You can see more information on [how to manage the service here](#).

In case your package can host unlimited domain domains (Platinum Unlimited, Reseller hosting) and you wish to activate the service for more domain names than those supported for activation through myTophost, you can obtain one of [SpamExperts Packs](#) Top.Host.
