

How can I install Let's Encrypt SSL certificate through Plesk?

- 2021-07-20 - SSL / Let's Encrypt

Let's Encrypt SSL Certificate is a Certificate Authority (CA) that enables you to create a free SSL certificate for your domain.

You can install it easily through Plesk by taking the following steps:

1. Log into [myTophost Panel](#) and select **Plesk Login** next to the plan you are interested in installing the SSL for.
2. In **Websites & Domains** tab, choose **Let's Encrypt**.
3. Type your email address (it may be used in emergency announcements or in case of key loss). Check **Include** if you want to install SSL for `www.yourdomain.com` and select **Install**.
4. After completing the installation, the service will be successfully installed on your domain within 60 minutes.
