How can I install the SSL in Plesk for my webmail?

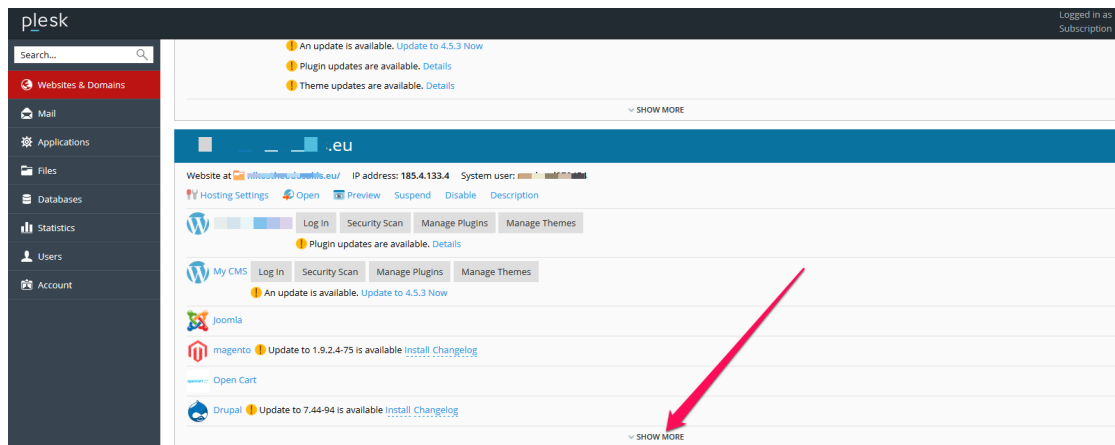

- 2021-08-28 - [Email](#)

Once you have issued the CSR and you receive the certificate from the issuing authority, follow the steps described below in order to install your hosting plan for your webmail through Plesk Panel.

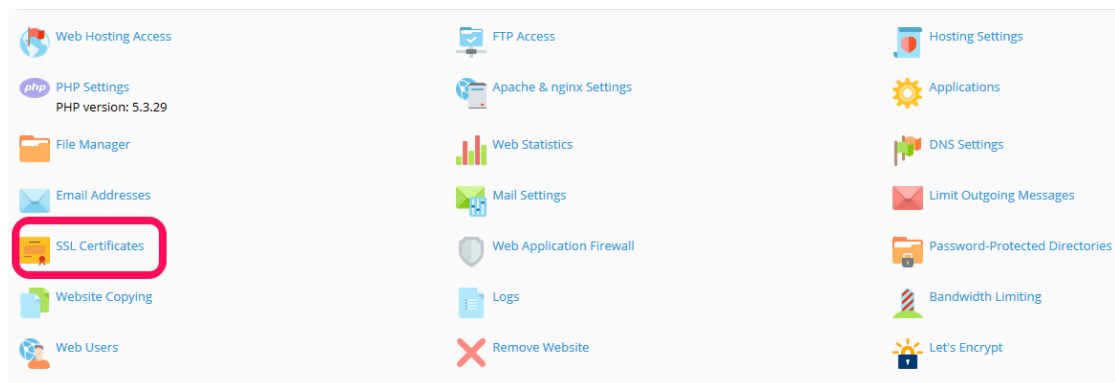

1. Log into [myTophost Panel](#) and then click on **Plesk Login** in order to connect to the Plesk of the plan that you are interested in.

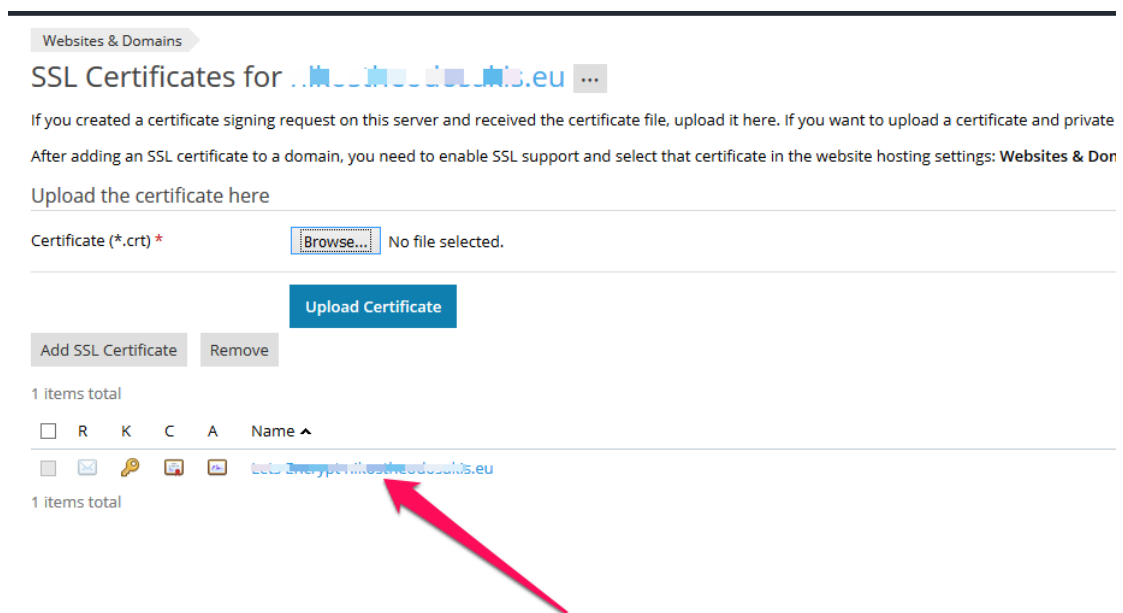

2. In the **Websites & Domains** tab, click on **Show More**.

3. Click on **SSL Certificates**.

4. Click on the name of the Certificate.

5. Upload the Private key, crt key, CA by selecting **Choose File** on the right of each key.

Otherwise, you can copy and paste the keys that you have received in your email.

In the field **Certificate (*.crt)**, paste the first key in the order that was sent to you (main certificate) and in the field **CA certificate (*.ca.crt)** paste the root and Intermediate (double key).

Upload the certificate files

Use this form to upload the components of a certificate as constituent files.

Private key (*.key) *

Choose File

No file chosen

Certificate (*.crt) *

Choose File

No file chosen

CA certificate (*.ca.crt)

Choose File

No file chosen

6. In the **Websites & Domains** tab, click on **Mail Settings**.

The screenshot shows the cPanel interface for the 'Websites & Domains' tab. At the top, there are tabs for Mail, Applications, Files, Databases, Statistics, Users, Account, and WordPress. Below these, a header bar displays website information: 'Website at httpdocs/' with IP address '88.99.148.47(v4)' and system user 'xrissal098211'. A row of icons includes File Manager, Mail, Databases, and WordPress. The main area contains a grid of service icons. The 'Mail Settings' icon, located in the bottom right of the grid, is highlighted with a red rectangular box. Other visible icons include Web Hosting Access, Git, Ruby, Applications, Website Importing, DNS Settings, Limit Outgoing Messages, Password-Protected Directories, Web Users, FTP Access, Let's Encrypt, PHP Settings, File Manager, Web Statistics, Email Addresses, SSL/TLS Certificates, Website Copying, Hosting Settings, Node.js, Apache & nginx Settings, Mail Importing, Web Statistics SSL/TLS, Web Application Firewall, and Logs.

7. In the field **SSL/TLS certificate for webmail** select the installed SSL from the drop down menu.
