## How can I install the SSL on Plesk Onyx once it is sent from the issuing authority?

- 2021-08-31 - SSL / Let's Encrypt

Once you have created the CSR and receive the certificate from the issuing authority, take the following steps to install it to the hosting plan through Plesk Panel.

1. Log into <u>myTophost Panel</u> and click on **Plesk Login** in order to connect to the Plesk of the plan that you are interested in.

7. Find the section called **Security**. You will see the option **SSL Support** being **ON**. Select your certificate from the drop down menu. Click on **OK** at the bottom of the page, in order to complete the process.

Security
To secure transactions with your site, use SSL protocol, which encrypts all data and transfers it over a secure connection. To employ SSL, install an SSL certificate on the site, and then select it below.
✓ SSL support
Certificate
Web scripting and statistics
Specify which of the following programming and scripting languages should be interpreted, executed or otherwise processed by the web server.
✓ SSI support
✔ PHP support (PHP version 5.3.29 by OS vendor 🔽, run PHP as FastCGI application 🔽 )
Note that changing the PHP handler type may disrupt the operation of existing PHP scripts on this website.
Learn how to choose the most suitable PHP settings
CGI support (cgl-bin directory is located in the root directory of webspace v)
Perl support
Python support
FastCGI support (required for Ruby on Rails)
AWStats V Web statistics (Protect access to your v to statistics with your FTP username and password 🗹)
Custom error documents
