

How can I install WordPress through Plesk?

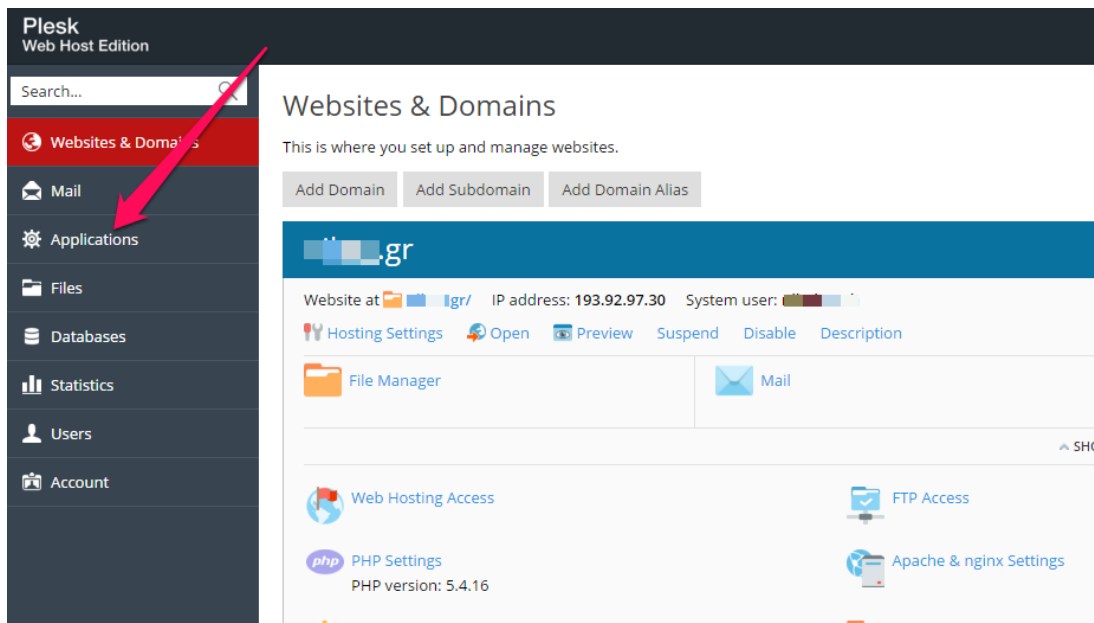

- 2021-08-12 - Άλλες

In case you want to install WordPress through Plesk, follow the steps described below.

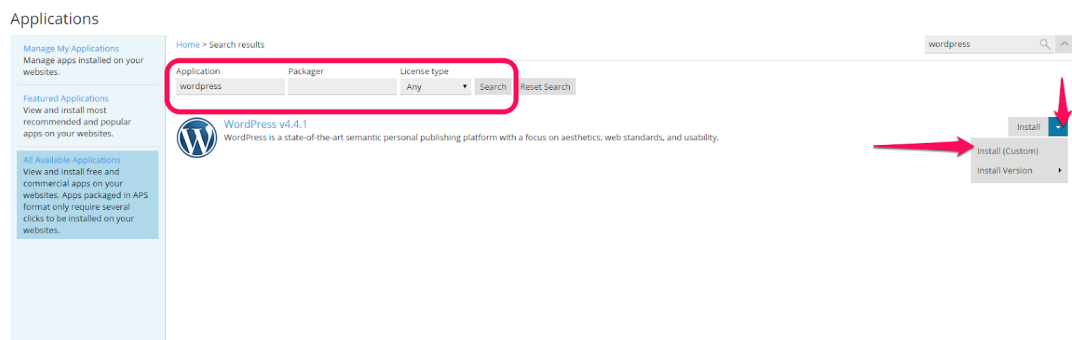

1. Log into [myTophost Panel](#) and then click on **Plesk Login** in order to connect to the Plesk of the plan that you are interested in.

2. Click on **Applications**.

3. Click on **All available applications**, type WordPress in the search bar and click on **Search**. Once you see the search results, click on **Custom Install** in order to download the application.

4. Read and accept the terms of use by checking the box **I accept the terms of Licence Agreement** and then click on **Next**.

Installation of WordPress

To install this application, you have to read the end user license agreement and agree to its terms.

I accept the terms of License Agreement

5. Choose the location where you want to download WordPress. If you want it to be in the root folder, leave the field on the right-hand side of the site blank. If you prefer a specific subfolder, simply enter it in the blank field on the right-hand side of the site.

a) Check the box **Automatically update this app when updates are available** if you want WordPress to be automatically updated.

NOTE: If you want it to be automatically updated, there might be plugin / theme incompatibilities which can lead to malfunctions on your website. In this case we suggest that you do not select this option. Plesk will notify you anyway when there is an update available.

b) In **Administrative Access**, select if you prefer to connect to WordPress management with your Plesk credentials or create new credentials directly from there.

Installation of WordPress

Specify the location where this web application should be installed

http://[domain].eu/

To provide secure access to this application, install it on a website with SSL support. Such websites have addresses starting with "https". To install the application to a directory other than the website root, specify the directory name.

Update Settings α

Automatically update this app when updates are available

The app will receive automatic updates to newer versions. Warning: Use this option with care because updates can significantly affect the app functionality. For example, app extensions may stop working with another version of the app.

Administrative access β

Administrative access to the application

Use administrative credentials not connected to any particular user

These credentials will be used for administrative access to this application. Since they are not associated with any particular user, no shortcuts on My Services page will be created.

Administrative username

Administrative password

Generate

Show

Confirm password

Grant administrative access to existing user

A shortcut for administrative access to the application will be placed on selected user's My Services page. User's credentials will be used for administrative access to the application.

6. In the section **Main configuration** during installation, Plesk will automatically fill in some fields. You can edit them however you want and click on **Install** to complete the process.

Main configuration

Administrator's email *

Site name *

Interface language *

Database server *

Database name *

Prefix of tables

Database user name *

Database user password

Confirm password

* Required fields

Install

Cancel

NOTE: Automatic download allows Plesk to create the database and the configuration file, therefore you don't need to do anything.
