How can I transfer an already installed SSL to my Top.Host plan?
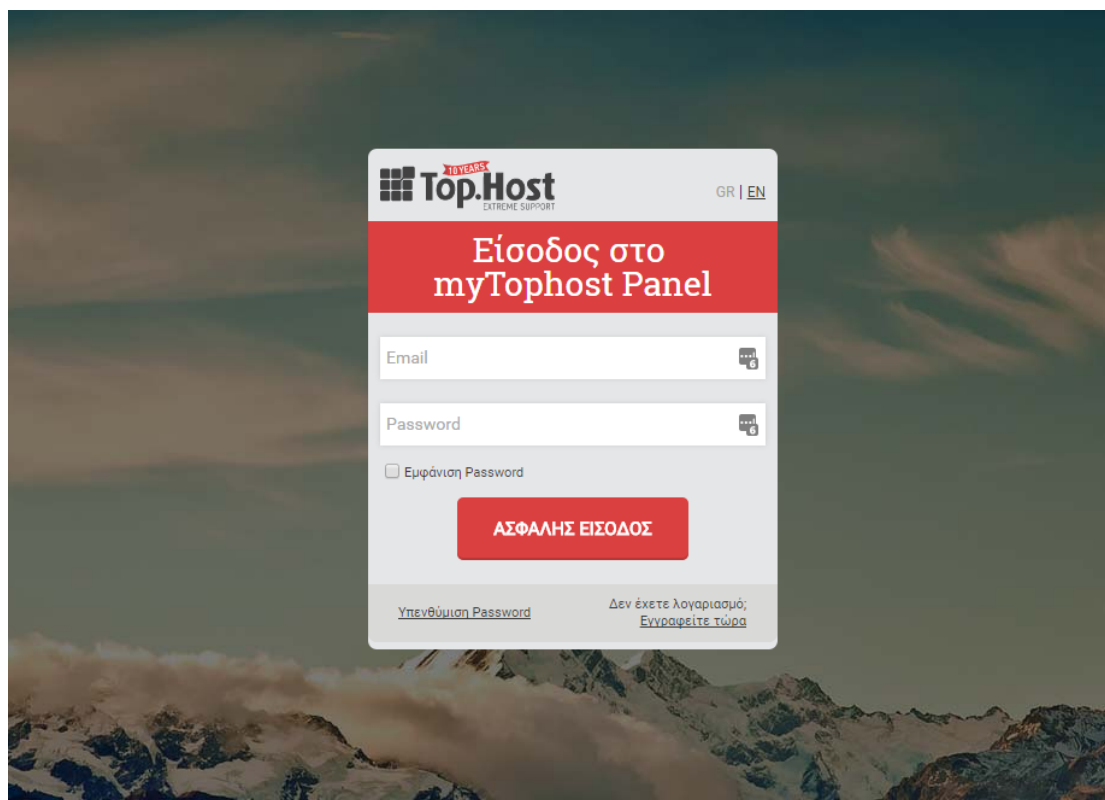

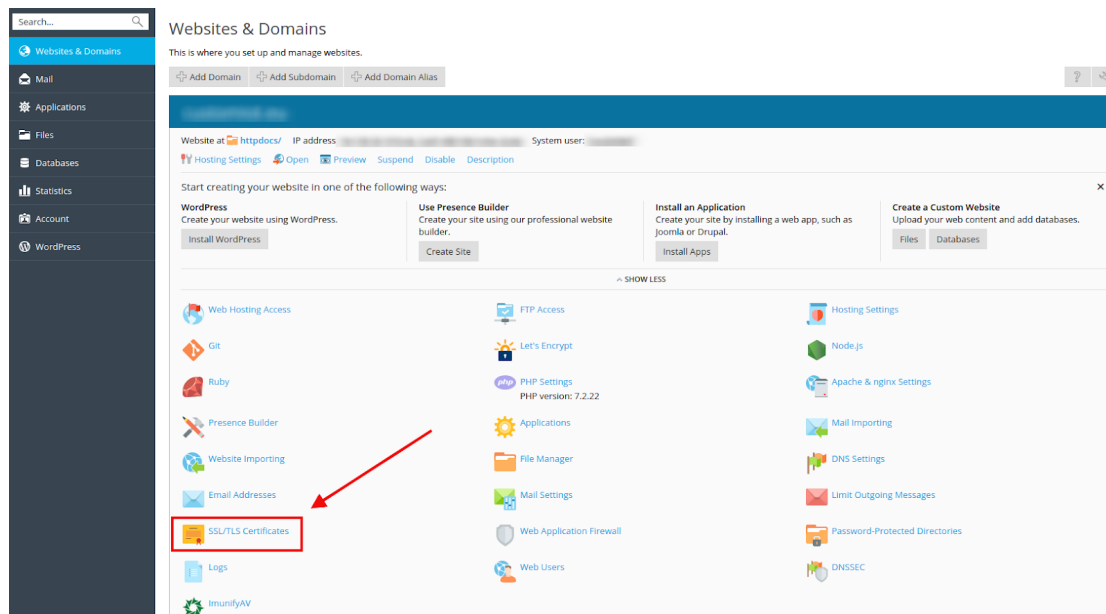

Ioanna Anifanti - 2021-08-27 - Λοιπές

If you have already installed the SSL to your current registrar and wish to transfer it to Top.Host, or you would like to transfer an already installed certificate, from one web hosting plan to another, then take the following steps.
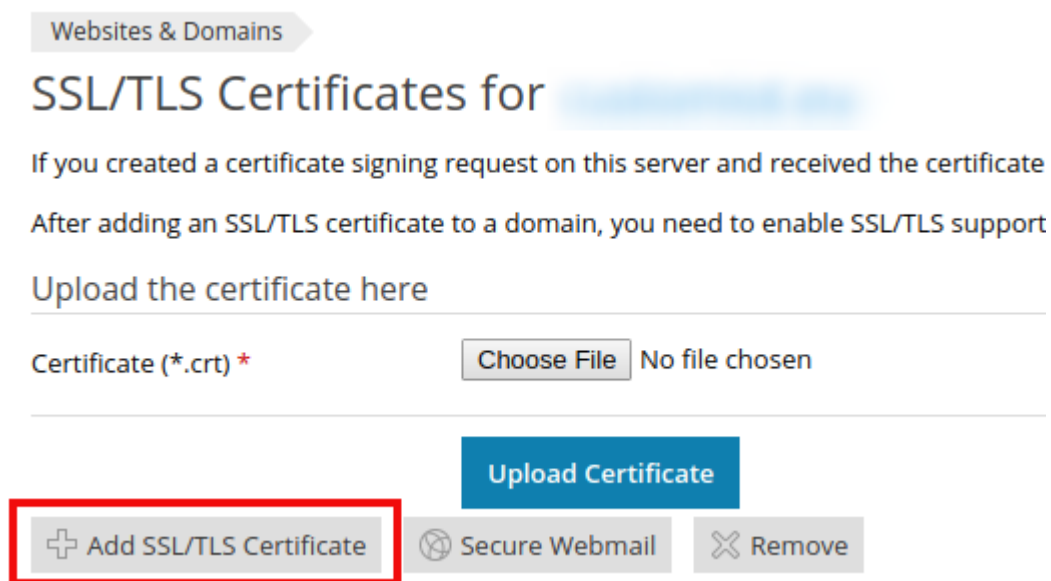

1. Find the **Private**, **Crt and CA** keys that correspond to the current SSL and save them to your computer in text format or copy-paste them in a text editor in text format.

2. Log into myTophost Panel and click on **Plesk Login** to connect to the Plesk of the plan you are interested in.

3. In the **Websites & Domains** tab, click on the icon **SSL Certificates**.

4. Click on **Add SSL Certificate**.

5. You have the possibility to transfer the SSL either by **copying the certificates' text** or by **uploading the files**.

5.1 Transferring the SSL by copying the text

5.1.1. In the page that opens, fill in the SSL name in the field **Certificate name**.

5.1.2 . Next, in the bottom of the page, copy the certificates from the previous web hosting plan, in the fields as described in the image below. More specifically:

    1. In the field **Private key**, paste the Private key from the previous web hosting plan

    2. In the field **Certificate (*.crt)**, paste the CRT certificate from the previous web hosting plan

    3. In the field **CA certificate (.*ca.crt)**, paste the CA certificate from the previous web hosting plan

* NOTE: The CSR key transfer to the new web hosting plan is optional.

5.1.3 Once you have filled in all the above mandatory fields, click on **Upload Certificate**.

5.2 Transferring SSL by uploading files

5.2.1 In the page that opens, fill in the name of the SSL in the field **Certificate name**.

5.2.2 Upload the Private, crt and CA keys by clicking on **Choose File** on the right of each key.

5.1.3 Once you have uploaded the certificates, click on **Upload Certificate**.

6. In the **Websites & Domains**, click on **Hosting Settings**.

7. Find the section called **Security**. Make sure that the option **SSL Support** is **enabled**. Select your certificate from the drop down menu. Click on **OK** at the bottom of the page, in order to complete the process.

Security

To secure transactions with your site, use SSL/TLS protocol, which encrypts all data and transfers it over a secure connection. To employ SSL/TLS, install an SSL/TLS certificate on the site, and then select it below.

☑ SSL/TLS support

☐ Permanent SEO-safe 301 redirect from HTTP to HTTPS

Certificate   [Not selected ▼]

Web scripting and statistics

Specify which of the following programming and scripting languages should be interpreted, executed or otherwise processed by the web server.

☐ SSI support

☑ PHP support (PHP version [7.2.22 ▼] , run PHP as [FastCGI application ▼])

Note that changing the PHP handler type may disrupt the operation of existing PHP scripts on this website.
