

How to create a CSR on cPanel 11?

- 2021-08-27 - cPanel / WHM

In order to create a **CSR** (Certificate Signing Requests) on **cPanel 11**, take the following steps:

1. Click on the **SSL/TLS Manager**.
- 2 . Then, select **Certificate Signing Request (CSR)** and click on **Generate, View, or Delete SSL certificate requests**.
3. With the CSR key, fill in the Generate a New Certificate Signing Request.
4. Click on **Generate**, to create a new CSR.
5. The CSR will appear on cPanel, as shown in the red box, where you can see a display example of your CSR. (This is only an example and it cannot be used to generate an SSL certificate.)
6. Save a copy of your CSR. You will need your CSR for the online order process. You will be asked to copy it and then paste it into a specific CSR box.
