How can I enable a Password Protected Directory in Plesk Onyx?

- 2020-02-12 - Άλλες

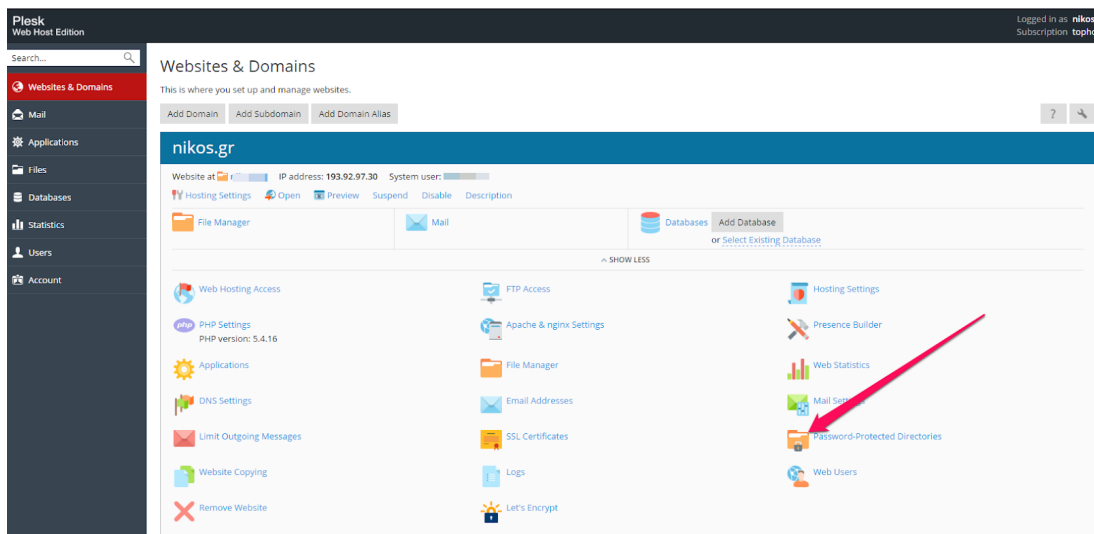

In order to enable a **Password Protected Directory** in Plesk, follow the instructions below.

1. Log into [myTophost Panel](#) and then select **Plesk Login** in order to connect to the Plesk of the plan that you are interested in.

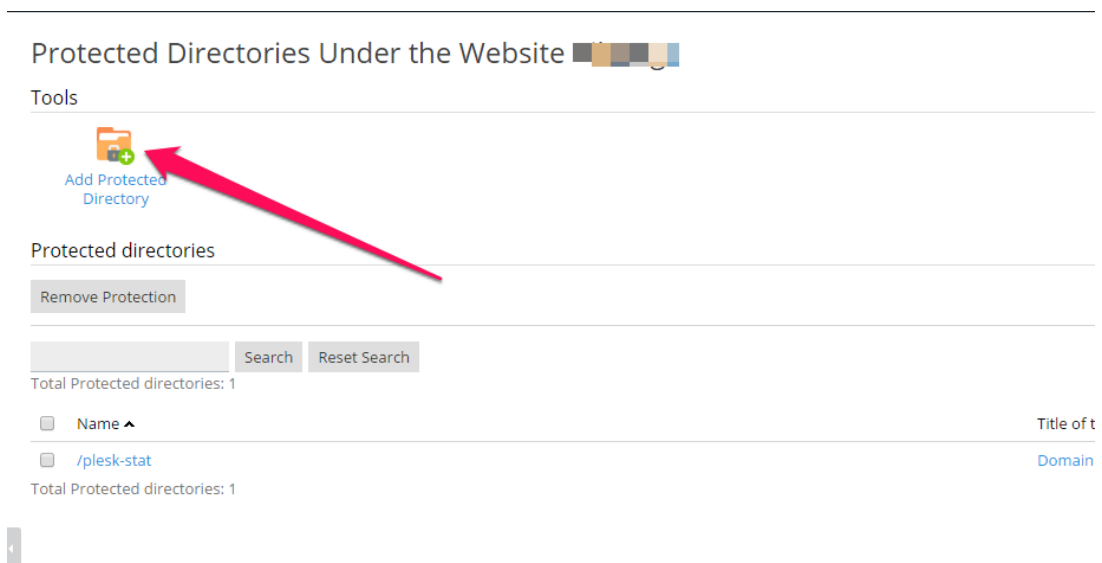

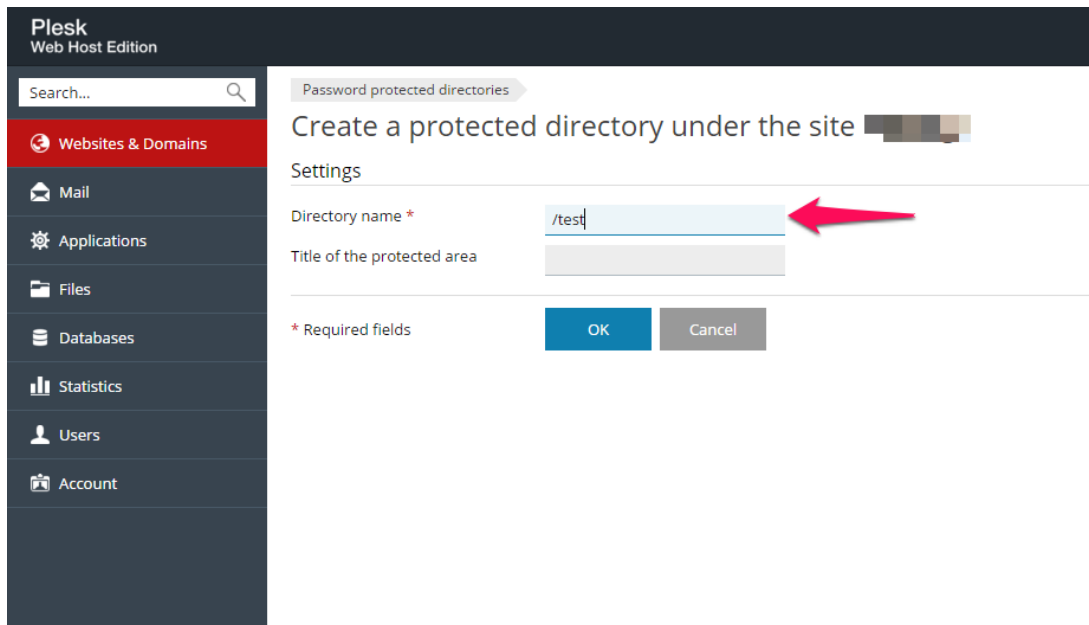

2. In the tab **Websites & Domains** select **Password Protected Directories**.

3. Click on **Add Protected Directory**.

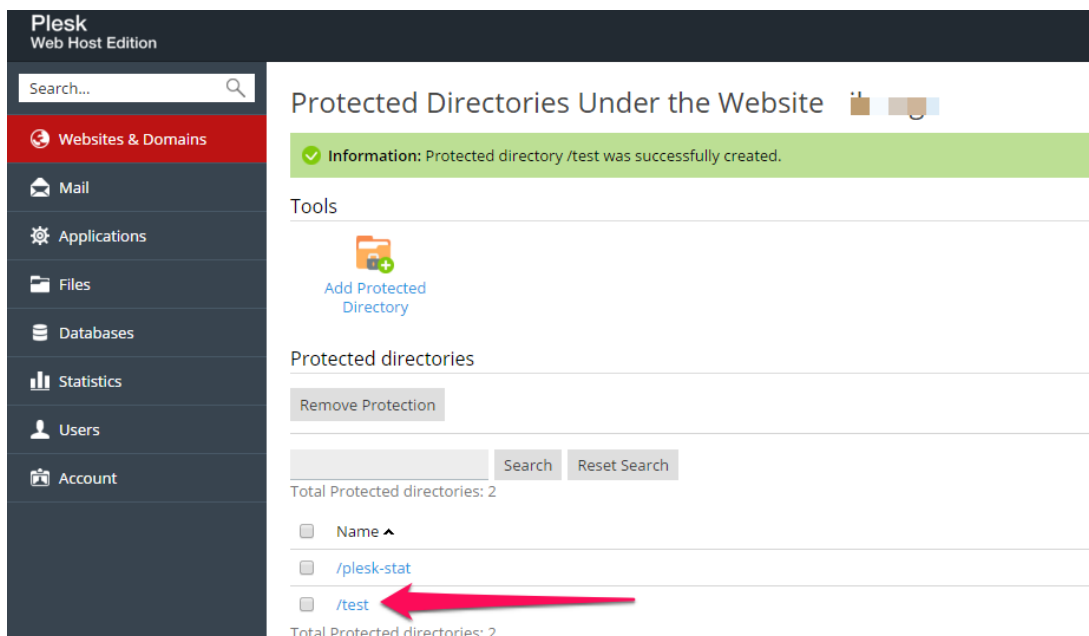

4. In **Directory Name**, enter a name for your directory. Leave Title of the protected area blank since it's not mandatory. In our example, we put "test".

The screenshot shows the Plesk Web Host Edition interface. On the left is a sidebar with navigation links: Websites & Domains (selected), Mail, Applications, Files, Databases, Statistics, Users, and Account. The main content area is titled 'Password protected directories' and 'Create a protected directory under the site'. Below this is a 'Settings' section with two input fields: 'Directory name *' containing '/test' and 'Title of the protected area' which is empty. A red arrow points to the 'Directory name' field. At the bottom of the form are 'OK' and 'Cancel' buttons, with a note '* Required fields'.

5. Select the **protected directory that you created** and add a new user (username / password) by clicking on **Add New User**.

The screenshot shows the Plesk Web Host Edition interface. The sidebar is the same as in the previous image. The main content area is titled 'Protected Directories Under the Website'. A green information banner at the top states: 'Information: Protected directory /test was successfully created.' Below this is a 'Tools' section with an 'Add Protected Directory' button. The 'Protected directories' section contains a 'Remove Protection' button and a search bar. Below the search bar, it says 'Total Protected directories: 2'. A list of directories is shown with checkboxes: '/plesk-stat' and '/test'. A red arrow points to the '/test' entry. At the bottom, it says 'Total Protected directories: 2'.

6. **Enter a Username and Password** so that the user can log in with this information,

when they type the Protected Directory.
