How can I enable a Password Protected Directory in Plesk Onyx?

- 2020-02-12 - Άλλες

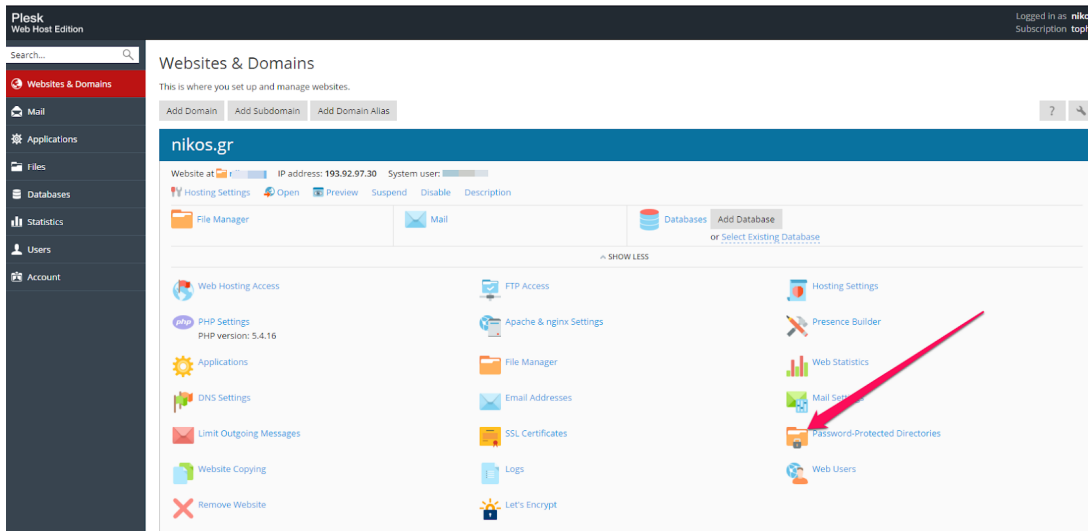

In order to enable a **Password Protected Directory** in Plesk, follow the instructions below.

1. Log into [myTophost Panel](#) and then select **Plesk Login** in order to connect to the Plesk of the plan that you are interested in.

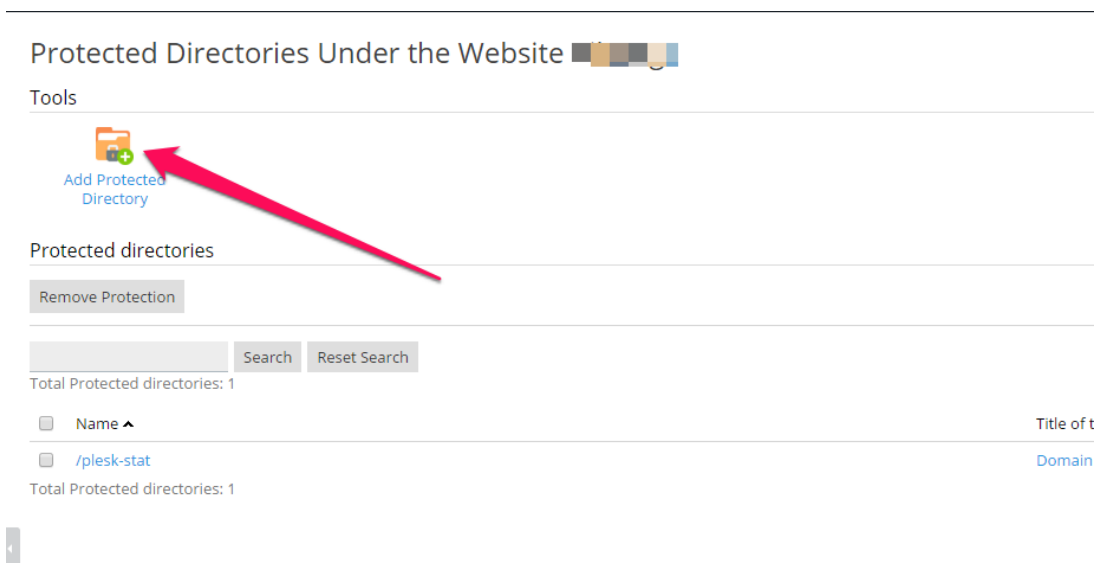

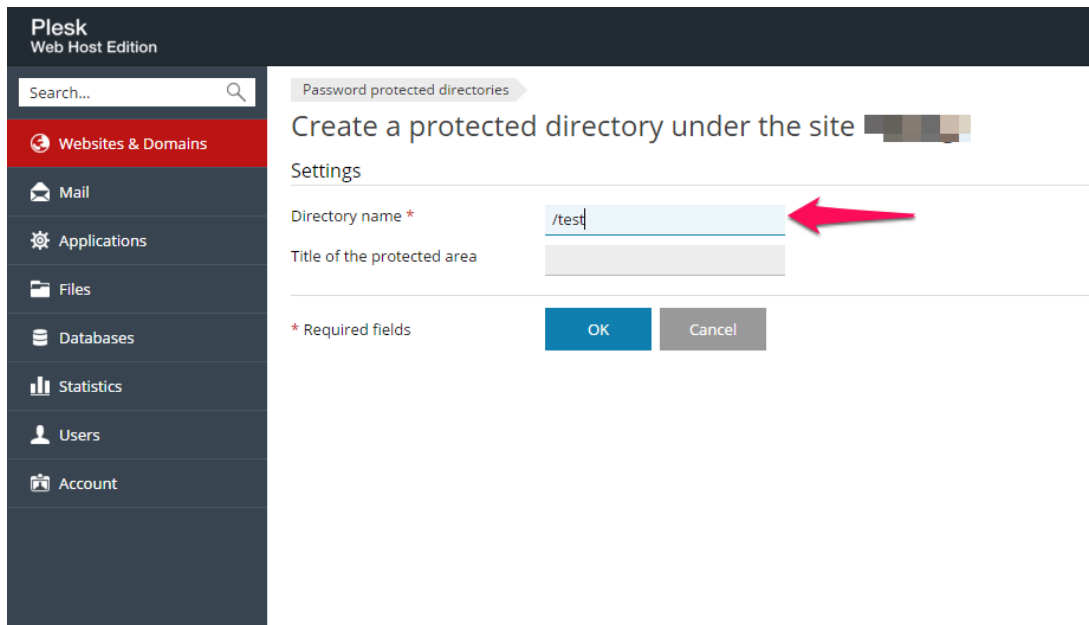

2. In the tab **Websites & Domains** select **Password Protected Directories**.

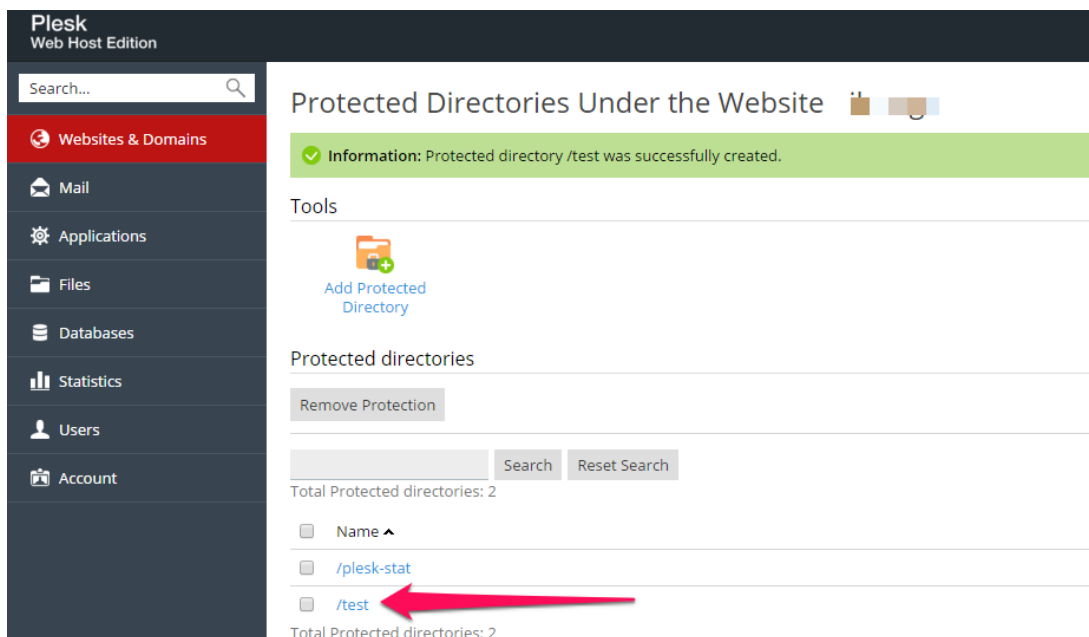

3. Click on **Add Protected Directory**.

4. In **Directory Name**, enter a name for your directory. Leave Title of the protected area blank since it's not mandatory. In our example, we put "test".

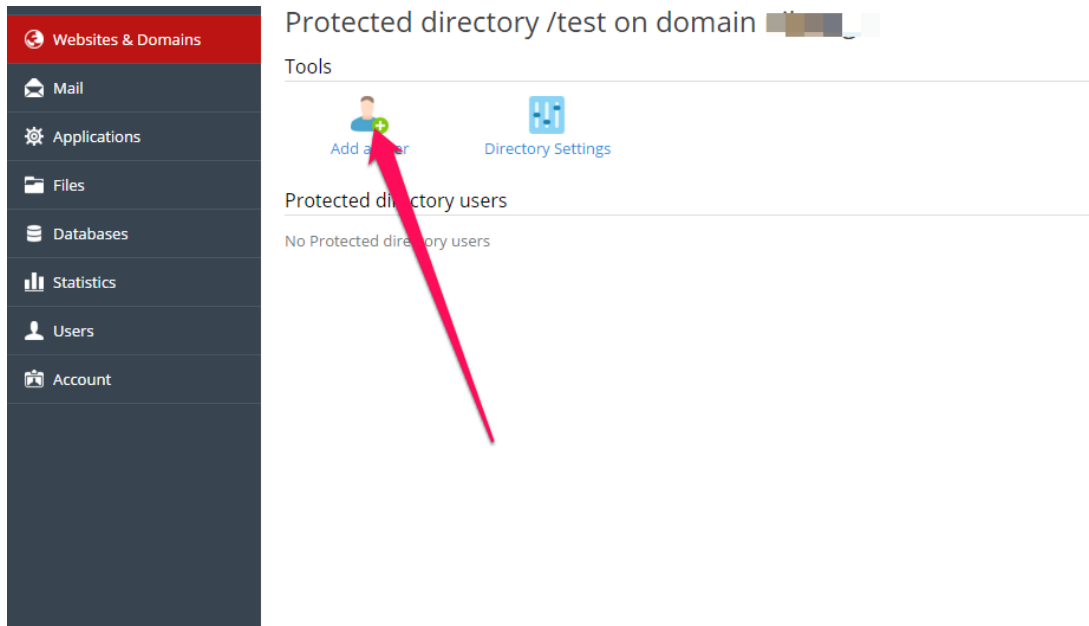

5. Select the **protected directory that you created** and add a new user (username / password) by clicking on **Add New User**.

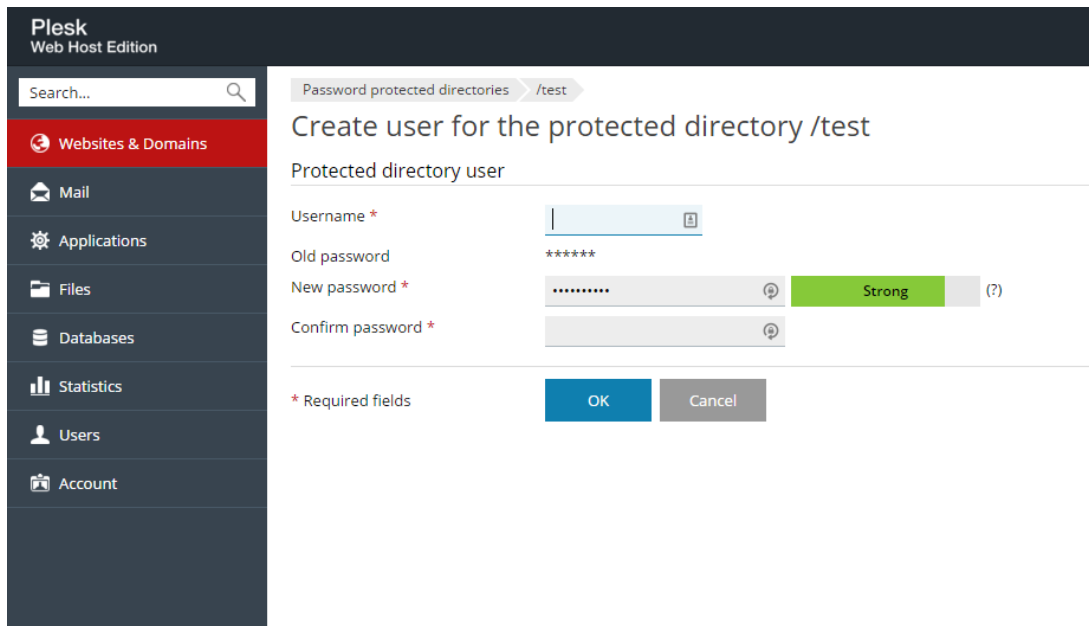

6. **Enter a Username and Password** so that the user can log in with this information,

when they type the Protected Directory.

The screenshot shows the Plesk control panel interface. On the left is a dark sidebar with navigation options: Websites & Domains (highlighted in red), Mail, Applications, Files, Databases, Statistics, Users, and Account. The main content area is titled "Protected directory /test on domain" and includes a "Tools" section with "Add a user" and "Directory Settings" buttons. Below this is a section for "Protected directory users" which currently shows "No Protected directory users". A red arrow points from the "Add a user" button towards the bottom of the page.

This screenshot shows the "Create user for the protected directory /test" form in Plesk. The breadcrumb path is "Password protected directories /test". The form fields are: "Username *" (empty text input), "Old password" (masked with asterisks), "New password *" (masked with asterisks, with a "Strong" password strength indicator and a help icon), and "Confirm password *" (masked with asterisks). At the bottom, there are "OK" and "Cancel" buttons. A note indicates "* Required fields".
