Incoming and Outgoing mail server change - Macmail - 2023-04-01 - Email Clients

In case you want to change the hostname for incoming and outgoing mail and you use Macmail, follow the instructions describe below:

1. Open the apoo and click Mail and Preferences.

ń	Mail	File	Edit	View	Mailbox	Message
	Abo	ut Mai	I			
	Preferences ೫,				ж,	
	Accounts Provide Mail Feedback					
	Add Account					
	Services		►			
	Hide	e Mail Other w All	rs		жн жн	
	Quit	Mail			жQ	

2. Click on your Account (1), at Incoming Mail Server delete the records and enter the temporary host name eg linux77.papaki.gr and choose Edit smtp server list from the drop down menu (2).

00	Accounts	
General Accounts RSS	Junk Mail Fonts & Colors Viewing Composing Signatures Rules	
Accounts	Account Information Mailbox Behaviors Advanced Account Type: POP Description: Telsuitai Email Address: @@e	
+ -	?	

3. In the server name field delete the record and enter the temporary host name eg linux77.papaki.gr

o enter
mation Advanced
.com
÷

The hostname can be found in the hosting activation email with the subject "Web Hosting Activation - Account Login Information" and more specifically in the field "FTP Access Information" and "Temporary Hostname" as appears in the following image:
